

FULL DIP BLUE NITRILE GLOVE

Product Description

When choosing the best chemical resistant glove it is important to communicate with your chemical supplier and/or in house product safety specialist to ensure you are using the best available hand protection. Chemical resistant gloves are available in a variety of different coatings each engineered to resist degradation in certain chemicals and chemical concentrations over a period of exposure. Nitrile, latex, PVC, Neoprene and butyl rubbers are popular coatings used in the manufacturing process of chemical resistant gloves, and new blends are also being introduced to improve comfort and protection. Warning signs that your chemical resistant glove does not have satisfactory protection: discoloration, softening, swelling, detachment of coatings and blistering

Features

- Nitrile coating provides a good liquid barrier
- Excellent abrasion resistance
- Resistant to oil and grease
- Slip off style

SKU: NFD-

Product Details
